

Lockout / Tagout (LOTO) - Answer Key

1. The main purpose of LOTO is to:
A - Prevent unexpected energization or release of hazardous energy
2. Before servicing begins, the authorized employee must verify:
A - The machine is isolated and de-energized
3. Who normally applies personal lockout devices for covered servicing?
A - Authorized employees performing the servicing
4. Stored energy such as pressure or gravity must be:
A - Relieved, restrained or otherwise rendered safe
5. A stop button is:
A - Not a substitute for energy isolation
6. Affected employees should be notified:
A - Before controls are applied and after they are removed
7. If conditions allow energy to reaccumulate, workers should:
A - Continue monitoring and take steps to maintain isolation
8. Group LOTO should provide each authorized employee:
A - A level of protection equivalent to personal lockout
9. This downloadable course alone authorizes an employee to perform LOTO on any machine.
A - False
10. When outside servicing personnel perform covered work, host and contractor employers should:
A - Inform each other of their LOTO procedures

General/formal instruction. Employer- and machine-specific energy-control procedures are still required.
